

STATEMENT UNDER ARTICLE 19(1)

An express basis for all the amendments is contained in the original specification. We refer to page 2 lines 3-15 which most broadly indicates the invention, with the express example referred to at page 3 lines 9-13.

More specifically page 8 lines 2-7 refer to the illustrated embodiment having three optics sub-assemblies 36 and each of the lower printed circuit boards 32 and page 10 lines 8-22 which includes the statement:

"Clearly, a device with four pairs of sensors, a pair for each arm, is functional. A device with three pairs of sensors can be used if the fourth 2D force vector can be calculated from the other three."

Finally, page 11 lines 1-4 contain a further disclosure as follows:

"It is also theoretically possible to have a device with two pairs of sensors 21 on two arms 14 and two single sensors 21, appropriately oriented, on the other two arms 14."
